

## Supplemental Information & Instructions for 162-843 or GAC4608 Rear Fog Brake Lamp Accessory Suitable for All British Cars

In Germany, it is customary to fit a bright red lamp that lights up when the brakes are on and it is foggy. The additional light provides an extra margin of safety when visibility is reduced. Classic British Sportscars have brake lights that are dim compared to modern cars, and having an additional bright red brake light makes sense, foggy or not.

### About this lamp...

This accessory lamp comes with a pair of wire pigtails that will be spliced into your existing brake light circuit. The single mounting stud comes with an 8mm nut (use a 12 mm wrench), a lock washer, flat washer, and a special cupped washer. The cupped washer allows the mounting stud to pivot, which means the lamp can be mounted on an angled panel or bracket and the lamp may be adjusted to be horizontal.

This is a somewhat generic accessory, and as such, we do not have vehicle specific installation instructions.

However, the installation process is quite simple and straightforward. Find a suitable place to mount the lamp. For better visibility in fog, the lamp will generally be located below the rear bumper. Once you have a mounting point, you will need to add wire long enough to reach the brake light circuit in the trunk or rear fender.

If the wires must pass through the body shell, use an existing grommited hole, or drill a new hole and use a suitabel grommet. The wiring may be spliced directly into the main harness in the car, or you may use existing bullet connector blocks if suitable wire tips are soldered onto the wires. We suggest 162-200 wire tips if you choose to go that route.

*Although every effort has been made to ensure the accuracy and clarity of this information, errors and/or omissions on our part are almost inevitable. Any suggestions that you may have that will improve the information (especially detailed installation notes) are welcome. Please use the simple email form on the "Contact Us" page on the Moss website:*
