

Supplemental Information for 222-158 or BMH9514/5 Bracket Set, Seat Belt Anchor MGB GT with Retractor Type Seat Belts

The MGB GT from 73 on were fitted with retractor type seat belts. There is a seat belt anchor boss welded to the top of the fender arch in the GT.

However, the boss sits so close to the vertical bulkhead panel that the bulky retractor mechanism cannot be bolted directly to the boss. The factory came up with a simple bracket (1a, 2a) that served to connect the retractor assembly to the welded-in boss.

The OE brackets (1a, 2a) were yellow zinc (as in photos above). Brackets supplied by Moss (3a) are identical, except they are black in color.

Although every effort has been made to ensure the accuracy and clarity of this information, any suggestions that you may have that will improve the information (especially detailed installation notes) are welcome. Please use the simple email form on the "Contact Us" page on the Moss website:
