

Supplemental Information & Instructions for 865-055 Exhaust System, Free Flow TR6 72-76 with Dual Head Pipes

Details of the System

Constructed of heavy gauge 1 3/4" steel tubing. The four chromed tips give this system a distinctive look. This system will connect to the stock dual head pipes fitted 72-76. These head pipes are not included and they are not available new at this time. If the head pipes for your car cannot be used or are missing, these pipes will have to be fabricated locally-something a muffler shop should be able to do. If you are using a tubular header, suitable connecting pipes will have to be fabricated to suit the header you have. Because aftermarket systems vary in design and construction, it will be nearly impossible to determine exactly what you will need for your car until all the components are in the same place. If some fabrication will be needed, have it done by the nearest muffler shop that fabricates systems for street rods and custom cars. They will be able to figure out what is required and get it done quickly. It may cost a bit more, but the end result will be a clean, professional installation.

Although every effort has been made to ensure the accuracy and clarity of this information, any suggestions that you may have that will improve the information (especially detailed installation notes) are welcome.
